

IS IT SIMPLY CHRONIC EDEMA OR IS THERE MORE TO THE STORY JUST BENEATH THE SURFACE?

All chronic edema indicates an inadequacy or failure of the lymphatic system¹. A clinical approach should consider treating both the veins and lymphatic system¹.

(A) Color image of hemoglobin staining in the lower left leg.
(B) Near-infrared fluorescence image overlaid on the color image illustrating the presence of stasis within the lymphatic system corresponding with the hemoglobin stain on the lower left leg².

Fluorescence imaging illustrates lymphatic dysfunction associated with chronic edema.

It's time to consider the facts about treating lymphatics to truly make a difference for your patients. Get the latest clinical data and learn about FLEXITOUCH® PLUS at tactilemedical.com/products/clinical-evidence
